SIGPRO Wireless Selected to Introduce and Demo 3G Solutions at World Telecommunications Congress

Flexium™ Demo at WTC2002 in Paris

Ottawa, Ontario, Canada –15 Aug 2002 - SIGPRO Wireless an Ottawa based Wireless Mobility Company focused on developing System on Chip solutions for 3G wireless Personal Communication Devices (PCDs) has been invited to introduce and demonstrate the Flexium™ chip at the XVIII World Telecommunications Congress in Paris, France.

SIGPRO Wireless has been selected to present “A Breakthrough Architecture for Next Generation Hand-Held Devices” at the Newcomers Session on September 25th and 26th at the World Telecommunications Congress. As part of the session SIGPRO Wireless will conduct a live demonstration of the new applications the Flexium™ chip will enable for next generation PCDs. “We are so pleased that the WTC Technical Committee selected SIGPRO Wireless to present,” commented SIGPRO Wireless CEO Dr. Sundara Murthy. “The World Telecommunications Congress is one of the worlds most established telecommunication conferences.” This years World Telecommunication Congress will take place in Paris, France between September 22nd and 27th.

Founded in May 2000 by Dr. Sundara Murthy. SIGPRO Wireless is commercializing critical System-on-Chip (SoC) and associated software solutions for next- generation wireless mobility Personal Communication Devices (PCDs). With a pioneering architecture, SIGPRO’s programmable Flexium™ chip supports a variety of worldwide standards, data rates, protocols, services and applications. With Flexium™ inside, the next generation wireless PCD will “empower the individual” with a multitude of personal communication (cellular phones), computation (palm computers), information (email, web devices), navigation (GPS), and entertainment (MPEG4, MP3) services. Flexium™ is leading the technology “Convergence” in PCDs to deliver “All-in-one” integrated services to people on the move.
